

Abstract

Compositions, methods-of-preparing, and methods-of-use of a water-based rapid acting insecticidal bait containing a stabilized water-sensitive insecticide as an active ingredient are described. Also described is a storage stable composition containing the
5 water-sensitive insecticide and an insecticide stabilizer, such as boric acid or a nanoparticle. The composition can be easily applied into cracks, crevices, voids, or other pest harborage areas to rapidly kill insect pests, particularly cockroaches.
